**In the Claims**

1.-3. (Cancelled)

4. (Currently Amended) A method for controlling a bright annealing furnace for heat-treating a steel strip comprising a step that a partial pressure of steam within an internal environment of the furnace generating a boron oxide is reduced during heating to a value less than about  $1 \times 10^{-5}$ , wherein the step is conducted by lowering a dew point of the internal environment within a heating region of the furnace by insertion of a gas having a hydrocarbon component to the heating region of the furnace.

5. (Cancelled)

6. (Currently Amended) ~~The A method according to claim 4 for controlling a bright annealing furnace for heat-treating a steel strip,~~ wherein the step of reducing the ~~partial pressure of steam to a value less than about  $1 \times 10^{-5}$~~  step is conducted by lowering a dew point of the internal environment within ~~the a heating region of the~~ furnace by addition of a chemical compound having a carbon component to the heating region of the ~~internal furnace environment.~~

7. (Currently Amended) A method of suppressing generation of ~~born boron~~ oxide in a bright annealing furnace for heat-treating a steel strip comprising maintaining partial pressure of steam within the furnace during heating to less than about  $1 \times 10^{-5}$ , wherein the partial pressure of the steam is reduced by lowering a dew point within a heat region of the furnace by introducing a gas having a carbon component into the heating region of the furnace.

8.-9. (Cancelled)

10. (Currently Amended) A method of controlling generation of white powder in a bright annealing furnace for heat-treating a steel strip comprising maintaining partial pressure of steam within the furnace during heating to less than about  $1 \times 10^{-5}$  to suppress formation of boron oxide compounds from boron contained within steel strips in the furnace, wherein the partial pressure of the steam is reduced by lowering a dew point within a heat region of the furnace by introducing a gas having a carbon component into the heating region of the furnace.

11.-12. (Cancelled)
